

THE DISCRIMINANT AND ITS COMPLEMENT

ABSTRACT

Understanding something means learning how it degenerates. In this talk, we explore how computational experiments and interactive applets illuminate interplays between topology, algebraic geometry, and arithmetic. We will tour several distinct but related phenomena: a braided Gauss–Lucas theorem, degeneracies of the 27 lines on real cubic surfaces, and techniques for identifying special points on varieties. Throughout, we emphasize how the process of illustration functions as a generative methodology, exposing structural subtleties, sharpening conjectures, and framing classical problems in fresh terms.

FRIDAY, SEPTEMBER 11

US PACIFIC.....9AM
US EASTERN.....12PM
CENTRAL EUROPE.....6PM

Featuring "Show and Ask" Presenters

Diana Davis

Phillips Exeter Academy

The Illustrating Math Archive Group

CLAUDIO GÓMEZ-GONZÁLES
Carleton College

The talk will be on
