

FROM FRACTIONS TO FRACTALS

ABSTRACT

The geometry of continued fractions has been studied by numerous mathematicians, in particular through the Farey triangulation and the Ford circles. Recently in 2020, a deformation of continued fractions has been proposed by Morier-Genoud and Ovsienko in algebraic terms. In this talk, I shall present the geometry behind these deformations: the deformed Farey triangulation and a 1-dimensional circle fractal representing rational numbers. An extension to complex numbers leads to partial circle packings in 2d. Joint with Perrine Jouteur and Olga Paris-Romaskevich.

FRIDAY, JUNE 12

US PACIFIC.....9AM

US EASTERN.....12PM

CENTRAL EUROPE.....6PM

Featuring "Show and Ask" Presenters

Juliet Fiss

Independent Artist

Caroline Davis

Stony Brook University

ALEXANDER THOMAS

University of Lyon

The talk will be on
Zoom. Scan this
